Current Features

AutoRedirect

When you use the SAML Login Button of the Force SAML feature, you will be redirected to the URL of the page you want to access initially.

So when you click on a link in an email, you will be redirected to this link after you will be authenticated by the SAML IdP

Show/Hide system login

Show or hide the system login. At least one login methods is required.

Show/Hide SAML Login Button

When disabling the SAML Login Button, the login button will not longer be shown on the Login Pages.

You can still use the SAML plugin, using the SAML Login url `<baseUrl>/plugins/servlet/saml/auth`. This will redirect to the default page of the Application after logging in using SAML

If you want to be redirected to another page, you can use `<baseUrl>/plugins/servlet/saml/auth?samlRedirectUrl=<relative path>`.

E.g. in JIRA you can auto login and goto your open issues using the url `<baseUrl>/plugins/servlet/saml/auth?samlRedirectUrl=/issues/?filter=-1`

Rename the SAML Login Button

You can specify what the text needs to be for the SAML Login Button

Force SAML

When enabling this feature all requests which need a login screen will be redirected automatically to the SAML IdP server

Single Logout

You can enable single logout. When a user initiates a logout, the identity provider logs the user out of all applications in the current identity provider login session.

In your IdP provider use the url below as logout url:

<baseUrl>/plugins/servlet/saml/logout

Upload IdP XML

Select a IdP XML file and upload it

Specify Login Username from IdP

SAML UserId Field

The SAML Attribute that will be used to specify the Application username, use the value Nameld if you want to use the default Nameld of the SAML Response

Autoprovision Users

Create User

Create User if not exists

SAML User Id Field

Nameld

SAML User Id Field on creation

SAML User Name Field

name

SAML User Name Field on creation

SAML User Email Field

email

SAML User Email Field on creation

SAML User Groups Field

eduPersonAffiliation

SAML User Groups Field on creation

Default Usergroup(s)

jira-users

Assign the new created Users to these usergroups(s)

When the Username is not known by the application, you can opt to create this user in the application.

In order to be able to create this user, we need to specify the SAML Attributes we will use as DisplayName, Email and the groups the user will be assigned to.

SAML Username Field

The SAML Attribute that will be used to specify the DisplayName to the new user

SAML User Email Field

The SAML Attribute that will be used to specify the Email of the new user

SAML UsersGroup Field

The SAML Attribute that will be used to specify to which groups the new user will be assigned to.

Default Usergroup(s)

If the group field in the SAML Attributes is empty or doesn't exist we can specify the usergroups (comma separated) that this user needs to be assigned to.

Creation and Assigning Usergroups

When a new user is created, he is assigned to the usergroups which are the attribute values of the SAML Attribute with the name defined in the SAML UserGroups field.

If there are no attribute values, the user is assigned to the usergroups defined in the default Usergroups(s)

These usergroups are created if they do not exist.

Determine Username, Displayname, Email, Groups using the SAML Attributes and expressions

Create User	<input checked="" type="checkbox"/>	Create User if not exists
SAML User Id Field	<code>http://schemas.xmlsoap.org/ws/2005/05/identity/claims/emailaddress.split("@")[0]</code>	
	SAML User Id Field on creation	
SAML User Name Field	<code>http://schemas.microsoft.com/identity/claims/displayname</code>	
	SAML User nName Field on creation	
SAML User Email Field	<code>http://schemas.xmlsoap.org/ws/2005/05/identity/claims/emailaddress</code>	
	SAML User Email Field on creation	
SAML User Groups Field	<code>group</code>	
	SAML User Groups Field on creation	
Default Usergroup(s)	<code>bitbucket-users</code>	
	Assign the new created Users to these usergroups(s)	

Examples

expression	value of Nameld/SAML Attributes	value of Field	

Nameld.split("@")[0]	Nameld : 'username@emaildomain.com'	username	This will take the Nameld, and return the part before '@'. make sure you use the ascii quotes " and not the "
first_name + ' ' + last_name	first_name : 'John'	'John Field'	This will concatenate the two attributes with a space between them

Support for ServiceDesk

Show the login Button in Service Desk

Show / Hide the login Button in Service Desk

The screenshot shows the JIRA Service Desk login interface. At the top, there's a blue header bar with the text "Help Center". Below it is a white login form. The form features a large "Login" heading at the top. In the center, there's a blue button labeled "Login using Google Account". Below this button are two input fields: one for "Username" containing the text "hein", and another for "Password" containing several dots. Underneath these fields is a blue "Log in" button. To the left of the "Log in" button is a checked checkbox labeled "Keep me logged in". At the bottom of the form, there's a link "Forgot your password?". At the very bottom of the page, the text "JIRA Service Desk (3.4.0) · Atlassian" is visible, along with the Atlassian logo.

Authentication using Http Headers

When you want to allow authentication using http headers, you can do this by defining these 3 fields in the HTTP Header Authentication

If these headers and token are defined, and are present in the request, the user specified in the **Header User Name** is Authenticated on condition that the value of the **Header Token Name** is equal to the **Header Token Value**.

For security reasons, no direct access should be allowed to the application, all traffic should be done using a reverse proxy, and the reverse proxy should remove this headers when they are present in the request.

Use following url to login using headers: <baseurl>/dologin.action?os_destination=/default.jsp

CONFLUENCE

Use following url to login using headers: <baseurl>/dologin.action?os_destination=/index.action

OTHER ATLASSIAN PRODUCTS
