Create a Google Chrome performance recording

The Chrome performance recording can help us debugging the problem.

See https://developer.chrome.com/docs/devtools/evaluate-performance/reference/

Steps:

- Open Chrome and start from an empty page
- Show the Developer Tools, Menu > View > Developer

Open the Performance tab and click the record symbol (left)

- Go to your Jira / Confluence / Bitbucket page and perform the actions to reproduce the problem
 When you are done, stop the recording and save it (right-click)
